SUMMARY

Senior Full Stack Software Engineer with 4.6+ years of experience designing and delivering scalable web applications, distributed backend systems, AI-powered platforms, and enterprise search solutions. Experienced across Java, Spring Boot, React.js, Next.js, TypeScript, Node.js, FastAPI, PostgreSQL, Elasticsearch/OpenSearch, Redis, Docker, and Supabase, with a strong focus on backend architecture, authentication, API design, performance optimization, and cloud-native development. Engineered secure authentication systems, semantic search platforms supporting 50M+ indexed records, and AI-driven applications leveraging Retrieval-Augmented Generation (RAG) and Sentence Transformers. Proven record of reducing API latency by over 80%, improving search performance by 40%, and building maintainable software through scalable architecture, reusable components, and cross-functional collaboration.

EXPERIENCE

Meril Life Sciences (Nuvo AI)

Vapi, Gujarat, India

Software Engineer II

December 2024 - Present

- Engineered scalable backend services using Spring Boot, FastAPI, and Node.js powering AI-driven healthcare applications while improving maintainability through modular service architecture.
- Designed and optimized Elasticsearch/OpenSearch indexing pipelines supporting 50M+ biomedical records, improving search performance by 40% through query optimization and index tuning.
- Implemented Redis caching for frequently accessed APIs, reducing average response latency from 1.2 seconds to nearly 200 ms while lowering database load.
- Architected a custom authentication and session management platform using FastAPI, PostgreSQL, Supabase, JWT authentication, CSRF validation, and Snowflake-based distributed session identifiers.
- Built centralized authentication APIs aggregating user, workspace, project, and role metadata into a single request, significantly reducing frontend API calls.
- Designed secure authorization workflows including server-side session validation, token invalidation, and role-based access control for enterprise applications.
- Optimized PostgreSQL queries and authentication workflows to reduce redundant database operations while improving request throughput.
- Collaborated with frontend engineers, product teams, and QA throughout feature delivery, production debugging, and release cycles.
- Mentored junior developers through architecture discussions, code reviews, and onboarding, improving engineering productivity and development consistency.
- Spearheaded migration of core authentication and data access functions to microservices architecture utilizing Docker, Kubernetes, and FastAPI over a 6-month project, facilitating independent deployment cycles and increasing feature release frequency by 60% across 8+ production services.
- Engineered high-availability user management modules with Ruby on Rails for enterprise authentication microservices, accelerating feature release cadence by 60% in 6 months
- Developed and launched a multi-tenant Help Centre platform over 4 months, leveraging FastAPI, PostgreSQL, and Redis to deliver self-service support for 10K+ users monthly, resulting in a 35% decrease in support ticket volume and improved knowledge base engagement metrics.
- Integrated Kibana dashboards with OpenSearch clusters to monitor production API health, visualize error trends, and reduce

Grazitti Interactive

Vapi, Gujarat, India

Software Development Engineer

April 2022 - July 2024

- Engineered reusable React.js and TypeScript component libraries that standardized UI development across multiple enterprise applications, reducing feature development effort and improving code maintainability.
- Developed complex workflow-driven applications using React, Redux, and REST APIs, delivering responsive user experiences for large-scale enterprise platforms.
- Optimized biomedical search capabilities by designing efficient Elasticsearch queries, custom analyzers, and indexing strategies, improving search accuracy by 30% for healthcare datasets.
- Refactored frontend architecture through code splitting, lazy loading, and asset optimization, reducing application page load time by 20% and improving Core Web Vitals.
- Integrated backend APIs using Node.js and Express while collaborating closely with backend engineers to design scalable API contracts and improve frontend-backend communication.
- Improved data processing pipelines and asynchronous request handling, increasing overall application throughput by 35% while maintaining platform stability.
- Built reusable form engines, validation utilities, and shared UI modules adopted across multiple projects, reducing duplicated code and accelerating feature delivery.
- Collaborated with product managers, UX designers, QA engineers, and cross-functional development teams throughout Agile sprint planning, implementation, testing, and production releases.
- Participated in peer code reviews, debugging production issues, and performance optimization initiatives to improve software quality and engineering standards.
- Integrated distributed tracing with Jaeger and OpenTelemetry across Node.js microservices for 12-month project,
- Implemented distributed trace logging with Jaeger and OpenTelemetry across 15+ Node.js microservices over a 12-month period, providing granular visibility into system transactions, streamlining root cause analysis, and reducing incident resolution time by 25%.

Independent Client Projects

Vapi, Gujarat, India

Freelance React Developer

April 2020 - September 2021

- Developed modern single-page applications using React.js, JavaScript, HTML5, and CSS3, delivering responsive interfaces across desktop and mobile devices.
- Built reusable UI components, client dashboards, authentication flows, and REST API integrations while maintaining clean, modular codebases.
- Optimized rendering performance using component memoization, efficient state management, and lazy loading techniques to improve user experience.
- Collaborated directly with clients to gather requirements, translate business needs into technical solutions, and deliver projects within agreed timelines.
- Maintained production deployments, resolved post-release issues, and implemented iterative feature enhancements based on client feedback.

PROJECT

AI Resume Intelligence Platform

Independent • N/A

• Architected a full-stack RAG pipeline using Next.js, FastAPI, and Sentence Transformers to perform semantic retrieval over resume content instead of keyword matching.
• Implemented vector-based similarity search with configurable confidence thresholds, improving answer relevance while minimizing hallucinations and irrelevant responses.
• Designed application-level guardrails that restrict the LLM to retrieved resume context, preventing fabricated responses and ensuring grounded, context-aware answers.
• Engineered document ingestion, embedding generation, retrieval, and response orchestration into a modular pipeline, enabling scalable indexing of additional documents.
• Optimized retrieval latency through embedding caching and efficient preprocessing, delivering near real-time conversational responses.
• Built a responsive React-based chat interface with streaming responses, conversation history, and clean separation between frontend presentation and backend inference services.

Custom Authentication & Session Engine

Independent • N/A

• Engineered a custom authentication layer on top of Supabase GoTrue and PostgREST, bypassing SDK limitations through direct service integration using FastAPI.
• Designed distributed server-side session management using Snowflake-generated identifiers, enabling secure session tracking beyond stateless JWT authentication.
• Implemented JWT validation, CSRF protection, refresh-token handling, and server-side token invalidation to strengthen authentication security.
• Built a centralized /me endpoint aggregating authentication, workspace, project, and role metadata into a single database query, reducing frontend network requests and simplifying client architecture.
• Containerized authentication services using Docker, enabling reproducible local development and consistent deployment environments.
• Optimized PostgreSQL query execution and authentication workflows, reducing redundant database access while improving request throughput.

Enterprise Search Infrastructure

Independent • N/A

• Developed Elasticsearch/OpenSearch indexing pipelines supporting datasets exceeding 50 million records, enabling low-latency search across large biomedical repositories.
• Tuned analyzers, mappings, scoring strategies, and query execution to improve search relevance and increase search accuracy by 30%.
• Implemented Redis caching for frequently executed search requests, reducing response latency by over 80% while lowering backend database load.
• Optimized search APIs through efficient query composition, pagination, and aggregation strategies to improve scalability under concurrent workloads.
• Collaborated with cross-functional engineering teams to integrate enterprise search capabilities into production healthcare applications.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL
Frontend: React.js, Next.js, Angular, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Material UI
Backend: Spring Boot, Spring Framework, Node.js, Express.js, FastAPI, Django, REST APIs
AI / ML: RAG, Sentence Transformers, Vector Search, Semantic Search, LLM Applications, Prompt Engineering, Ollama
Databases: PostgreSQL, MongoDB, Redis, Supabase
